Subject: Re: Couch & Urine

No stains really fluoresced on the bottom cushions so don't know where we would test. Also tests do not identify urine just give indications and DNA results are minimal if any.

Let me know if there's anything else

thanks
mandi

[REDACTED] can the couch be processed for urine, say in the theory that she was strangled and she urinated on the couch?

I thought we discussed this, but I can't remember. Is there anything we can do to test for urine?
