[REDACTED]

While going over the [REDACTED] for Michael Powell, I noticed he was communicating with [REDACTED] out of Boulder, Colorado. Research shows that they provide very high resolution satellite imagery of any particular spot on the earth. [REDACTED] below is the email exchange. I believe due to the coincidence that this is significant. I don't know the importance of the related date, but if there is any data which now exists and meets his criteria, it might be worth contacting [REDACTED] to see if they'd be willing to reach out to him to discover the exact area of Pendelton, Oregon he is pursuing. Thoughts?

Below, you need to read each message body from the bottom of the email up.

No, unfortunately, thanks.

But if another photo is taken (later than October 2011), I would be interested.

Cheers,

Mike

Hi Michael,

Is there still interest in this data? No worries if not.

Thanks,

[REDACTED]

Hi Michael,

I took a look in the archives and the most recent image we have of your area is from August of 2011. Will this work for you?

Thanks,
